

Ser. No. 09/939,899

PATENT
2001P07802US01**Amended claims**

1. (Currently Amended) A method for providing a user interface for use by a portable processing device for accessing and navigating patient record information, comprising the steps activities of:

receiving user identification information for use in authorizing user operation of said portable processing device;

initiating display of an image including a plurality of links to a corresponding plurality of individual patients;

acquiring data representing a patient record content index, said content index representative acquired data being dynamically derived, by processing information comprising an existing particular patient record, in response to a user command from said portable processing device to access said particular patient record;

initiating display of a patient record content index including a plurality of links to a corresponding plurality of items of patient record information image using said acquired data in response to user selection of a link to one of said plurality of individual patients; and

initiating display of an image including information comprising a portion of a patient record in response to user selection of a link to one of said plurality of items of patient record information.

2. (Currently Amended) A method according to claim 1, ~~including the step of~~ wherein,

said processing of said information comprising said existing particular patient record is performed ~~initiating generation of patient record content index data for display in said content index image~~ by one of, (a) ~~initiating generation by an application located in a remote device and (b) initiating generation by an application in said portable processing device.~~

3. (Currently Amended) A method according to claim 2, wherein said processing of said information comprising said existing particular patient record ~~including~~ includes the step activity of

deriving content index information from patient record information by parsing patient record information ancillary data to identify distinct patient record information sections.

Ser. No. 09/939,899

PATENT
2001P07802US01

4. (Original) A method according to claim 3, wherein said ancillary data comprises at least one of, (a) header data of said acquired patient record information, (b) descriptive data in a data field of said acquired patient record information, (c) identification data in a data field of said acquired patient record information, and (d) text data derived by parsing content of said acquired patient record information.

5. (Currently Amended) A method according to claim 1, including the step activity of,

initiating display of an image including a plurality of links to a corresponding plurality of lists of patients, and wherein said step of initiating display of an image including a plurality of links to a corresponding plurality of individual patients is performed in response to user selection one of said plurality of links to a corresponding plurality of lists of patients.

6. (Currently Amended) A method according to claim 1, including the step activity of,

initiating display of said patient record content index image including a plurality of links to a corresponding plurality of items of patient record information and ~~an~~ a plurality of image icons for display in a plurality of images, said image icon supporting at least one of, (a) initiating display of said image including links to a plurality of lists of patients, (b) initiating display of said image including a plurality of links to a corresponding plurality of individual patients, and (c) ~~initiating display of said patient record content index image including a plurality of links to a corresponding plurality of items of patient record information and~~ (d) initiating display of medical record information for a next patient.

7. (Currently Amended) A method according to claim 1, including the step activity of,

maintaining a row element stationary upon horizontally scrolling an image screen display including other elements of said row.

8. (Original) A method according to claim 7, wherein said stationary row element is the first data element of said row.

Ser. No. 09/939,899

PATENT
2001P07802US01

9. (Currently Amended) A method according to claim 1, including the step activity of,

maintaining a column element stationary upon vertically scrolling an image screen display including other elements of said column.

10. (Currently Amended) A user interface method for use by a portable processing device for accessing and navigating patient record information, comprising the steps activities of:

receiving user identification information for use in authorizing user operation of said portable processing device;

acquiring patient record information comprising an existing particular patient record from an information repository;

~~initiating generation of~~ dynamically generating a patient record content index by deriving content information from ancillary data associated with said acquired patient record information in response to a user command from said portable processing device to access said particular patient record; and

initiating display of data representing said patient record contents ~~image index~~ including a plurality of links to a corresponding plurality of items of patient medical record information.

11. (Currently Amended) A method according to claim 10, wherein ~~said step of initiating display of said patient record content index image~~ user command from said portable processing device to access said particular patient record is performed in response to comprises user selection of a link to a particular patient.

12. (Currently Amended) A method according to claim 10, including the step activities of

acquiring data representing an item of said patient medical record information in response to user selection of a link of said plurality of links and wherein

said item of said patient medical record information is available for access on said portable processing device when said portable processing device is offline and

initiating display of an image including information comprising an item of patient medical information in response to user selection of a link to one of said plurality of items of patient medical record information.

Ser. No. 09/939,899

PATENT
2001P07802US01

13. (Currently Amended) A user interface method for use by a portable processing device for accessing and navigating patient record information, comprising the steps activities of:

receiving user identification information for use in authorizing user operation of said portable processing device;

initiating display of a patient record content index image using data derived, by dynamically processing information comprising an existing patient record, in response to a user command from said portable processing device to access said particular patient record, said content index image including a plurality of links to a corresponding plurality of items of patient record information;

initiating display of an image including a recorded patient medical parameter value and an associated medical parameter label comprising an item of patient record information in response to user selection of a link to one of said plurality of items of patient record information in said content index image; and

initiating display of at least one of, (a) a reference range for said medical parameter and (b) a unit of measure for said medical parameter in response to user selection of said medical parameter label.

14. (Original) A method according to claim 13, wherein
said reference range comprises a normal value range for said medical parameter.

15. (Currently Amended) A method according to claim 13, wherein
said medical parameter label is a URL link stored in said portable processing device, and

said at least one of, (a) a reference range for said medical parameter and (b) a unit of measure for said medical parameter, is acquired and displayed using said medical parameter label URL.

16. (Currently Amended) A method according to claim 13, including the step activity of

initiating display of an image including a plurality of links to a corresponding plurality of individual patients; and wherein

said step of initiating display of a patient record content index image is performed in response to user selection of a link to one of said plurality of individual patients.

Ser. No. 09/939,899

PATENT
2001P07802US01

17. (Currently Amended) A method according to claim 13, ~~including the step of wherein,~~

said processing of said information comprising said existing patient record includes the activity of

initiating generation of said patient record content index image by deriving content information from ancillary data associated with acquired patient record information.

18. (Currently Amended) A system for providing a user interface for use by a portable processing device for accessing and navigating patient record information, comprising:

a communication network for receiving user identification information for use in authorizing user operation of said portable processing device; and

a display processor for,

initiating display of an image including a plurality of links to a corresponding plurality of individual patients;

initiating display of a patient record content index image using data derived, by dynamically processing information comprising an existing patient record, in response to a user command from said portable processing device to access said particular patient record, said content index image including a plurality of links to a corresponding plurality of items of patient record information in response to user selection of a link to one of said plurality of individual patients; and

initiating display of an image including information comprising a portion of a patient record in response to user selection of a link to one of said plurality of items of patient record information.

Ser. No. 09/939,899

PATENT
2001P07802US01

19. (Currently Amended) A processing system supporting remote operation of a plurality of portable processing devices used for accessing and navigating patient record information, comprising the steps activities of:

validating user identification information received from a portable processing device and communicating operation authorization to said portable processing device;

deriving content index information from patient record information in an existing patient record by parsing patient record information ancillary data to identify distinct patient record information sections in response to a user command from a portable processing device to access said particular patient record; and

communicating to said portable processing device patient record information including said patient record content index data in response to a request for said patient record information from said portable processing device.

20. (Currently amended) A system according to claim 19, wherein said communicated patient record information includes a medical parameter and including the step activity of,

communicating to said portable processing device at least one of, (a) a reference range for said medical parameter and (b) a unit of measure for said medical parameter in response to receiving a message addressed to a URL associated with a medical parameter label.

21. (Original) A method according to claim 19, wherein
said ancillary data comprises at least one of, (a) header data of said acquired patient record information, (b) descriptive data in a data field of said acquired patient record information, (c) identification data in a data field of said acquired patient record information, and (d) text data derived by parsing content of said acquired patient record information.

22. (Currently Added) A method according to claim 1, including the activity of,

acquiring data representing said portion of said patient record in response to user selection of said link and wherein

said portion of said patient record is available for access on said portable processing device when said portable processing device is offline.

Ser. No. 09/939,899

PATENT
2001P07802US01

23. (Currently Added) A method according to claim 1, wherein said activity of,

processing information comprising an existing particular patient record is performed in response to download of particular patient record information to said portable processing device and storage of said particular patient record information in said portable processing device.

24. (Currently Added) A method according to claim 1, including the activities of,

acquiring data representing said plurality of links to said corresponding plurality of items of patient record information and

storing said data representing said plurality of links in said portable processing device.
